

# Ultra ECOSHOT

## Chemical Dispensing System

We are pleased to add this new and secure dosing system to our range of dispensing systems for use with UB range of super concentrates. Ultra Eco Shot bridges the gap between our Ultra Blend dilution system and our simplistic and economic Ultra Dose system for dosage control.

Ultra ECOSHOT is a modular system and units can be joined together or separated according to the requirements at any individual site.

Two litre bottles are visible via a clear panel to ensure that users know the level of chemical product within the lockable cabinet.

Ultra ECOSHOT is designed for high use and high wear sites, due to its design and durability. Ultra ECOSHOT requires no plumbing and has a number of key features:

- **VARIABLE DOSAGE RATES**

The dispenser can be set for differing amounts between 5-30ml via the patented dosing ring; this gives accuracy of dilution for trigger spray, bucket fill and sink.

- **SECURITY**

As the system is lockable it reduces access to the product and eliminates gross wastage, where the product is not used via the dosage control system.

- **SLOW RELEASE PUMP**

A key feature of the Ultra ECOSHOT is a slow release push button mechanism which takes a number of seconds to re-set, eradicating multi-dosage and helping to control costs.

- **ECO FRIENDLY**

Ultra ECOSHOT promotes the re-use of dosing bottles, eliminates packaging waste and gives improved environmental performance. Suitable only for use with the UB range of 2 litre super concentrates

- **COLOUR-CODED**

The system is obviously colour-coded to abolish the mis-use of product and the dispensers have a high visual recognition for the products being utilised.

- **DURABLE**

The system has been created to be robust in high usage establishments whilst remaining economical. The combination of the variable dilution rate and slow release mechanism controls chemical usage to reduce wastage and optimise the amount of ready to use solution created from each 2 litre bottle.

Ultra ECOSHOT is designed to offer daily cleaning and maintenance for sites using the UB range of concentrates. At the recommended dilution rate, a single pump of Ultra ECOSHOT gives a daily maintenance strength of product, or two pumps provide a stronger weekly deep clean concentration.

## Ultra ECOSHOT Bucket

- Floor level dosing.
- Modular system can be joined to other Ultra ECOSHOT units.
- Does not require a mains water connection.
- Ideal for dispensing into buckets.

Compatible products:  
UB10, UB20, UB30, UB50,  
UB60, UB90.

Code: DIS302

## Ultra ECOSHOT Trigger

- Flexible trigger spray dosage 5ml - 30ml.
- Modular system can be interlined or used remotely.
- Does not require a mains water connection.

Compatible products:  
UB10, UB20, UB30, UB50,  
UB60, UB70, UB80, UB90.

Code: DIS301

## Ultra ECOSHOT Sink

- Extended dispensing nozzle.
- Chemical cabinet can be located away from the dispenser to give flexibility.

Compatible products: UB20, UB40

Code: DIS303
